# Story line

The story told in this storyboard is about Kim who works as a Software Developer for a company in her small town.  She heads to work in the morning, and like most mornings is running late. She won't make it to her morning scrum meeting; so she will have to do it from her car.

Some frames are hand drawn and some are generated from: https://www.storyboardthat.com

# Car Infotainment System

- The car infotainment system in this storyboard is comprised of two main systems.  The large portrait touchscreen and the wheel with customized controls.  The touchscreen provides insight into most operations and provides a way to switch apps.
- The steering wheel side panels are customized automatically by the central system, showing proper buttons and information depending on what is happening with the user. The touchscreen LEDs on both sides are designed keep hands on the wheel.

# Start process

- The infotainment system requires a user to be added to the car.  Guest users are supported and driving the car without a profile is also allowed (depending on owner settings).
- When started the user's phone is placed in the tray. The phone is recognized and accessed by the car (prior setup required).  The car then locks the phone into the car (phone can be removed by forcefully opening; no damage but not meant to be removed).
- When leaving the car the car will treat a phone left in console the same as an open door.

I am running late to work. Going to have to work from the car...

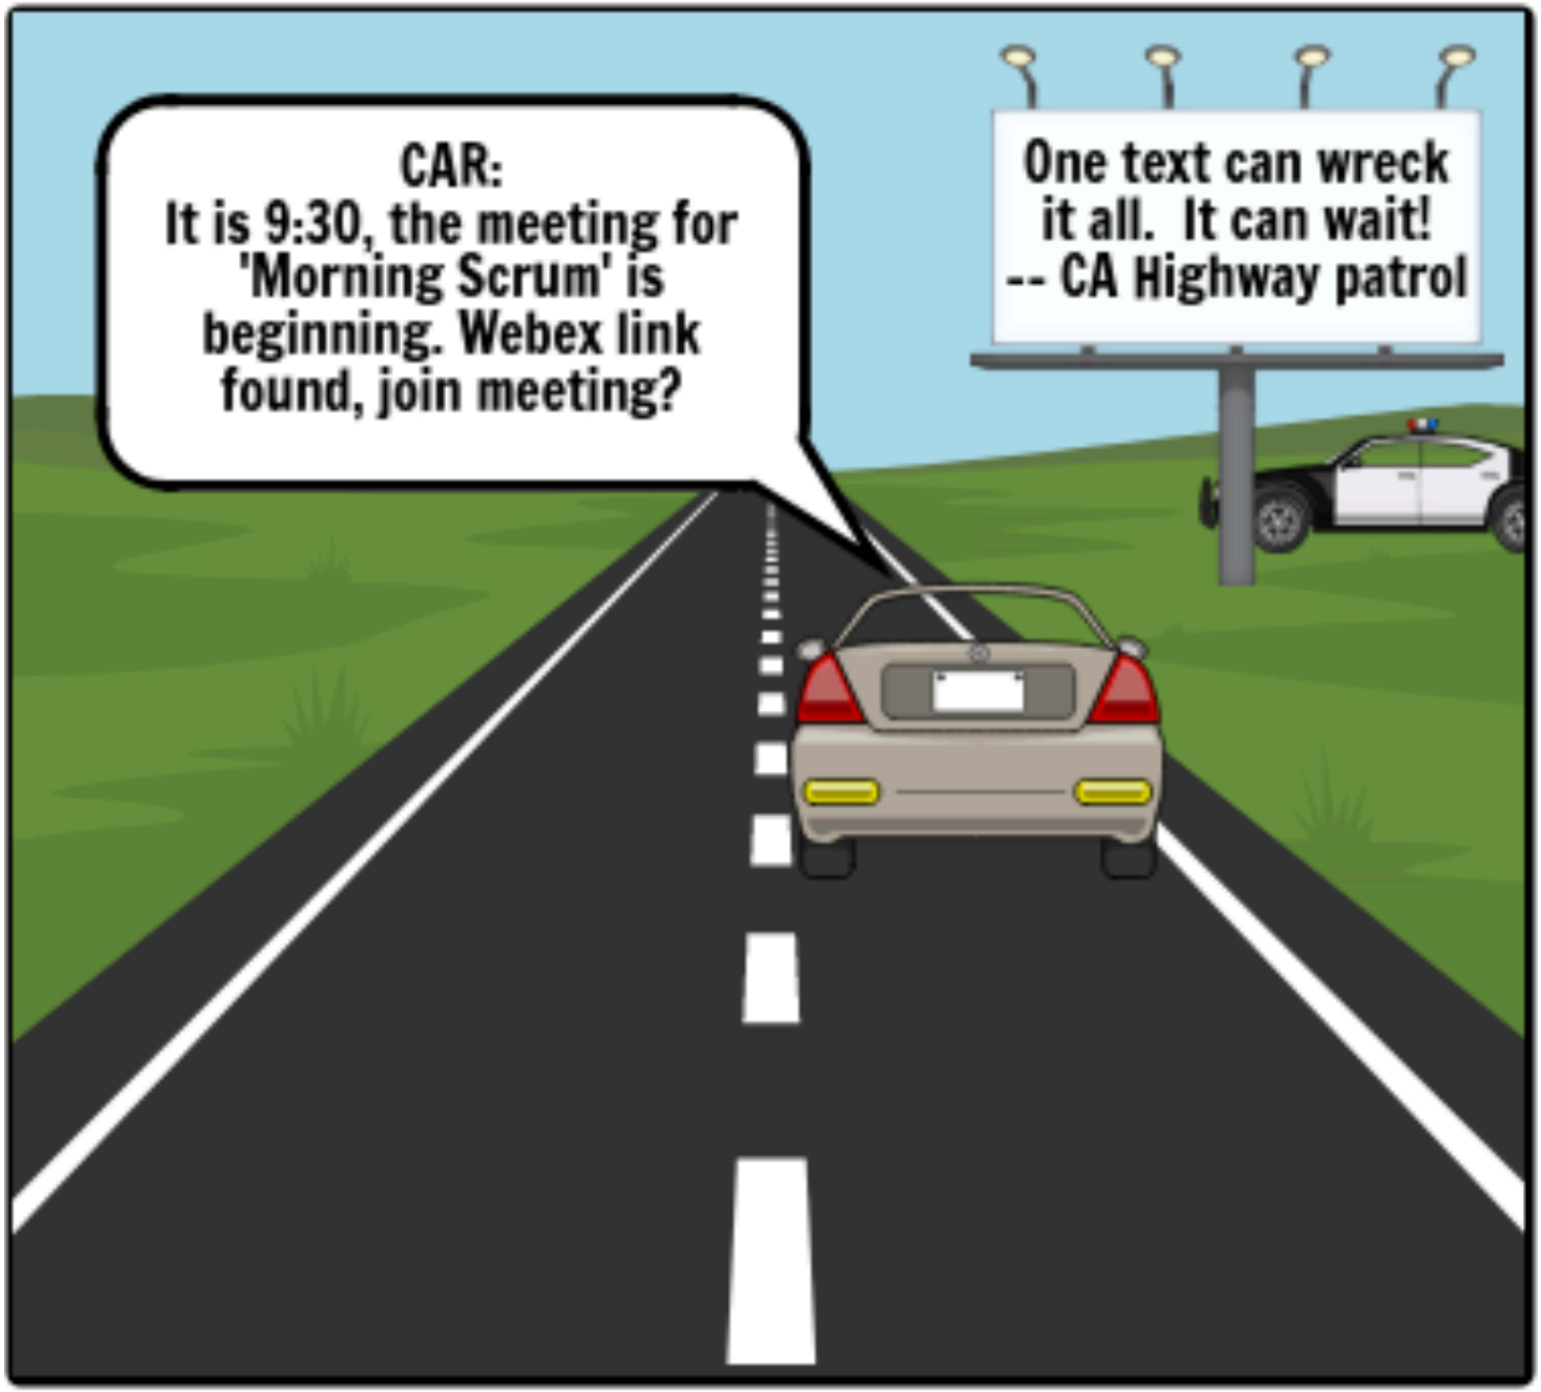
7mm



CAR:
It is 9:30, the meeting for 'Morning Scrum' is beginning. Webex link found, join meeting?
One text can wreck it all. It can wait!

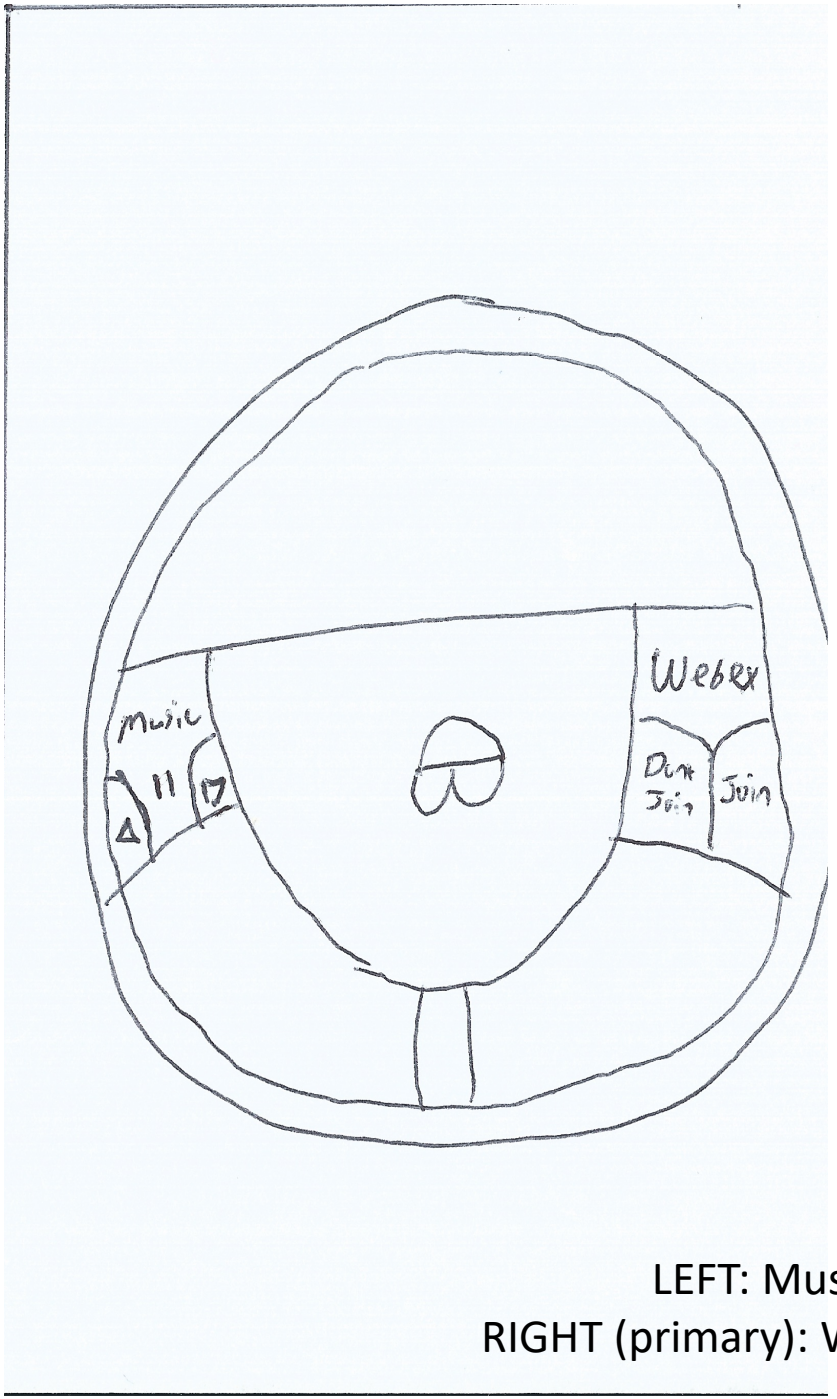
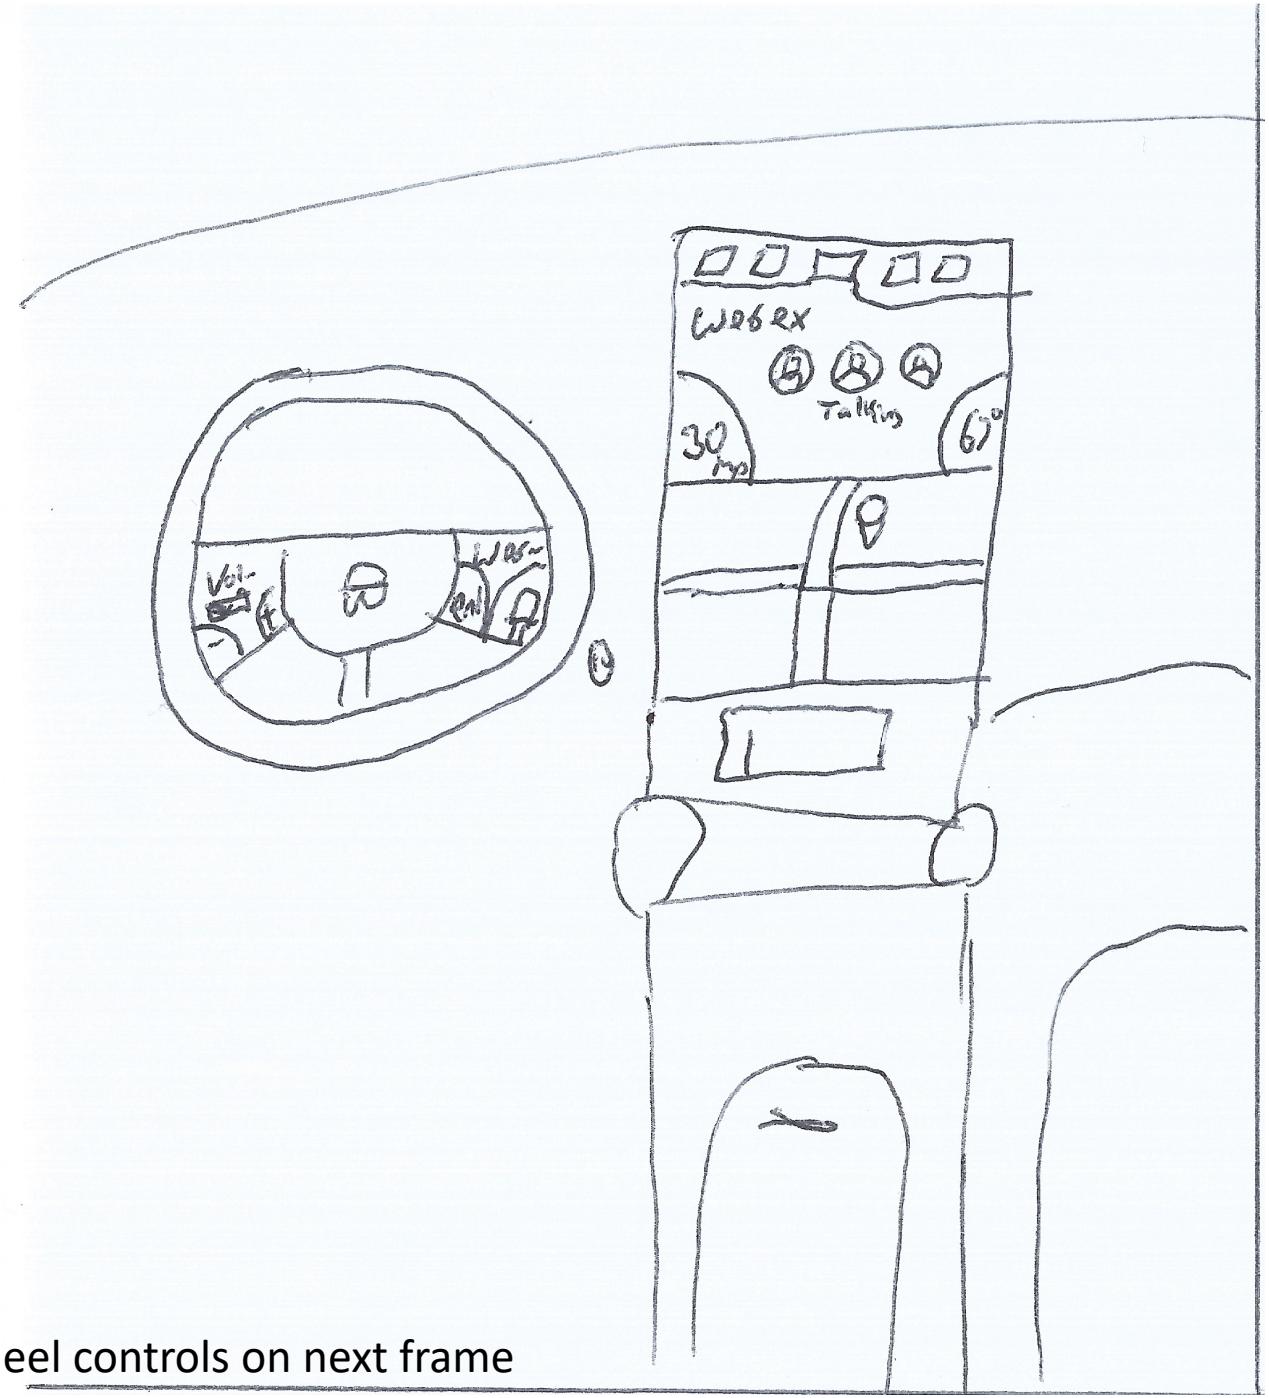
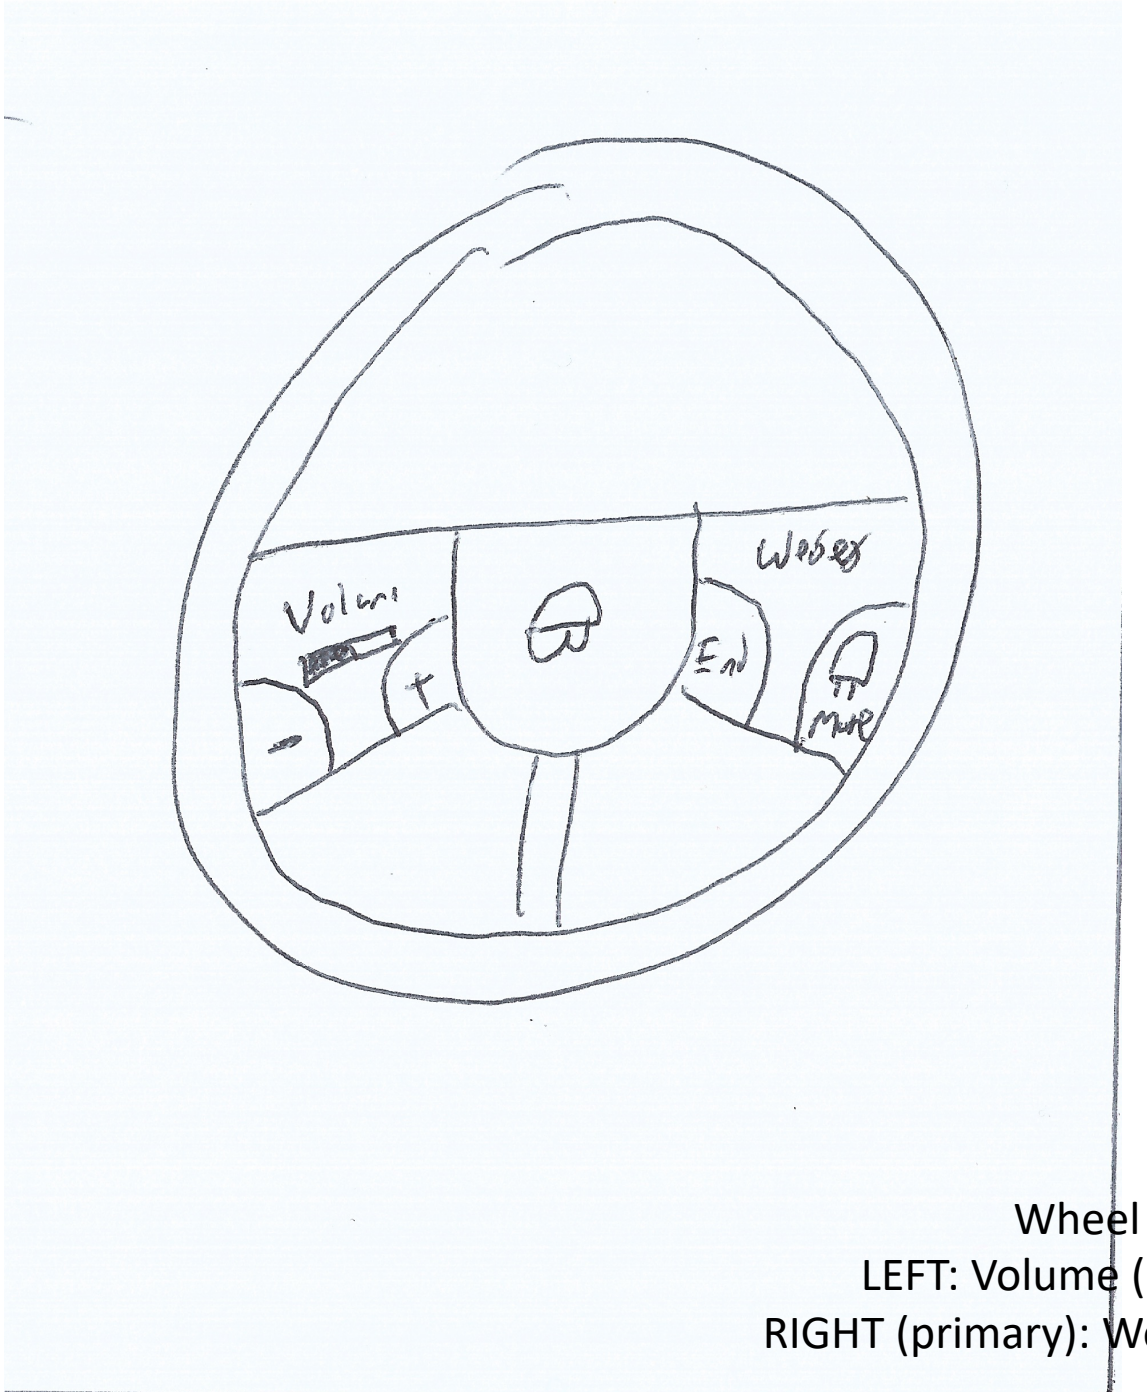
See detailed wheel controls on next frame



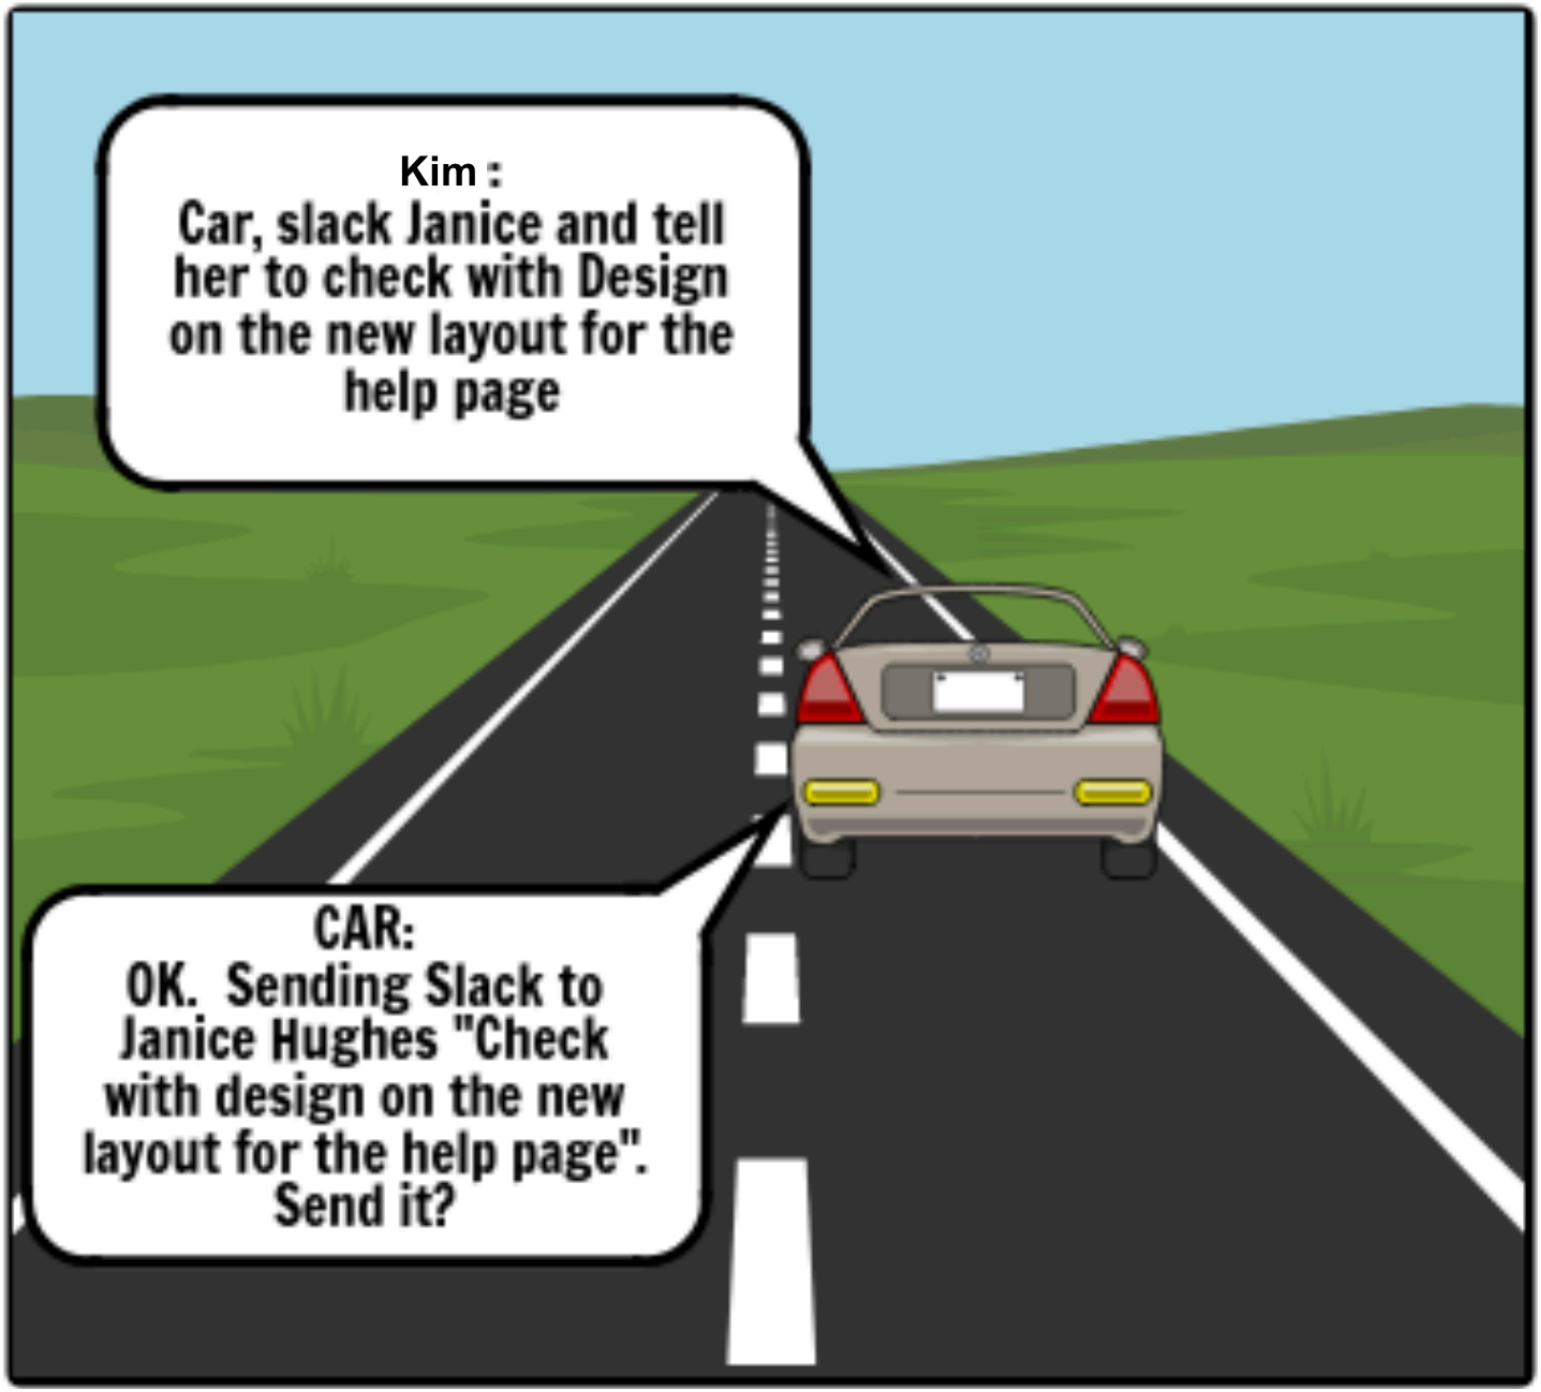
Wheel controls include:
LEFT: Music (Previous/Pause/Next)
RIGHT (primary): Webex (Join or Don't join)



See detailed wheel controls on next frame



Wheel controls include:
LEFT: Volume (slider/Up/Down)
RIGHT (primary): Webex (Mute/End)



Kim :
Car, slack Janice and tell her to check with Design on the new layout for the help page
CAR:
OK. Sending Slack to Janice Hughes "Check with design on the new layout for the help page". Send it?

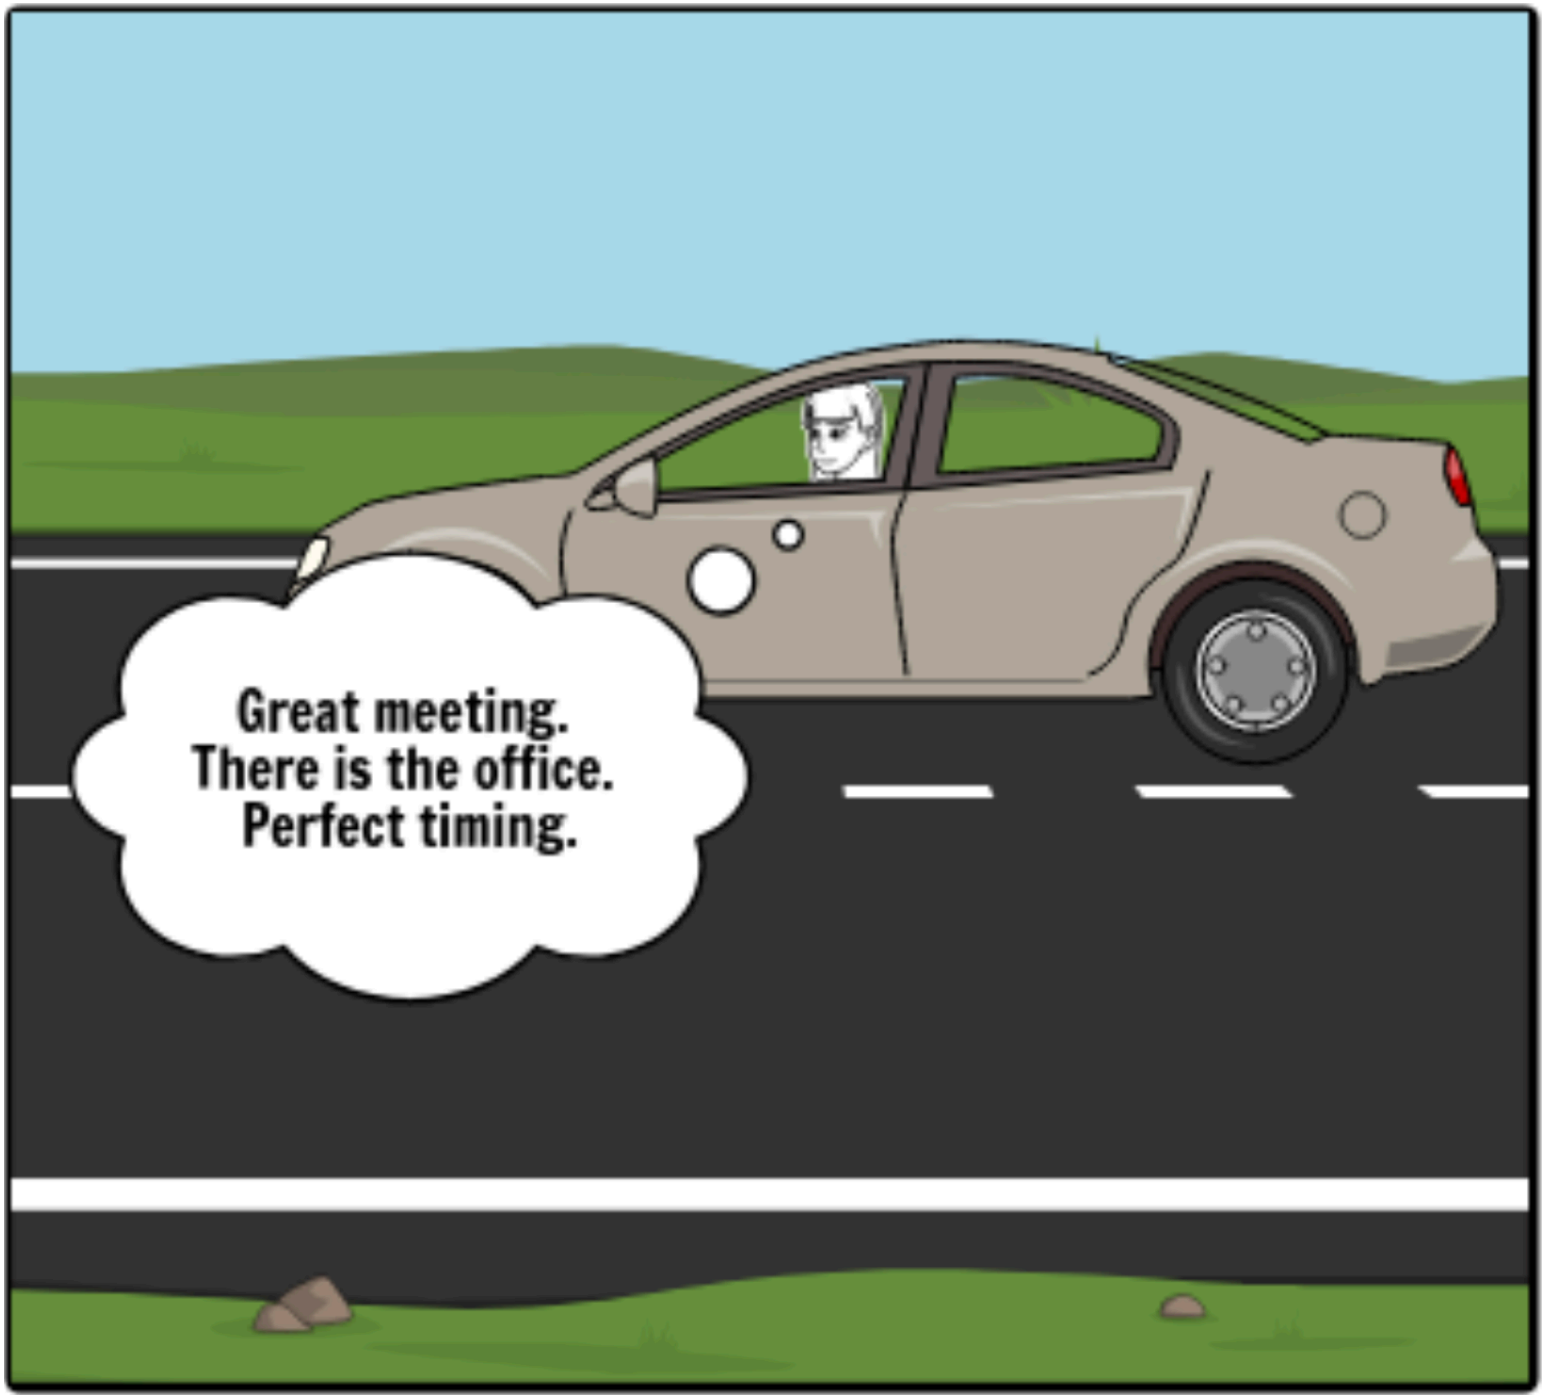
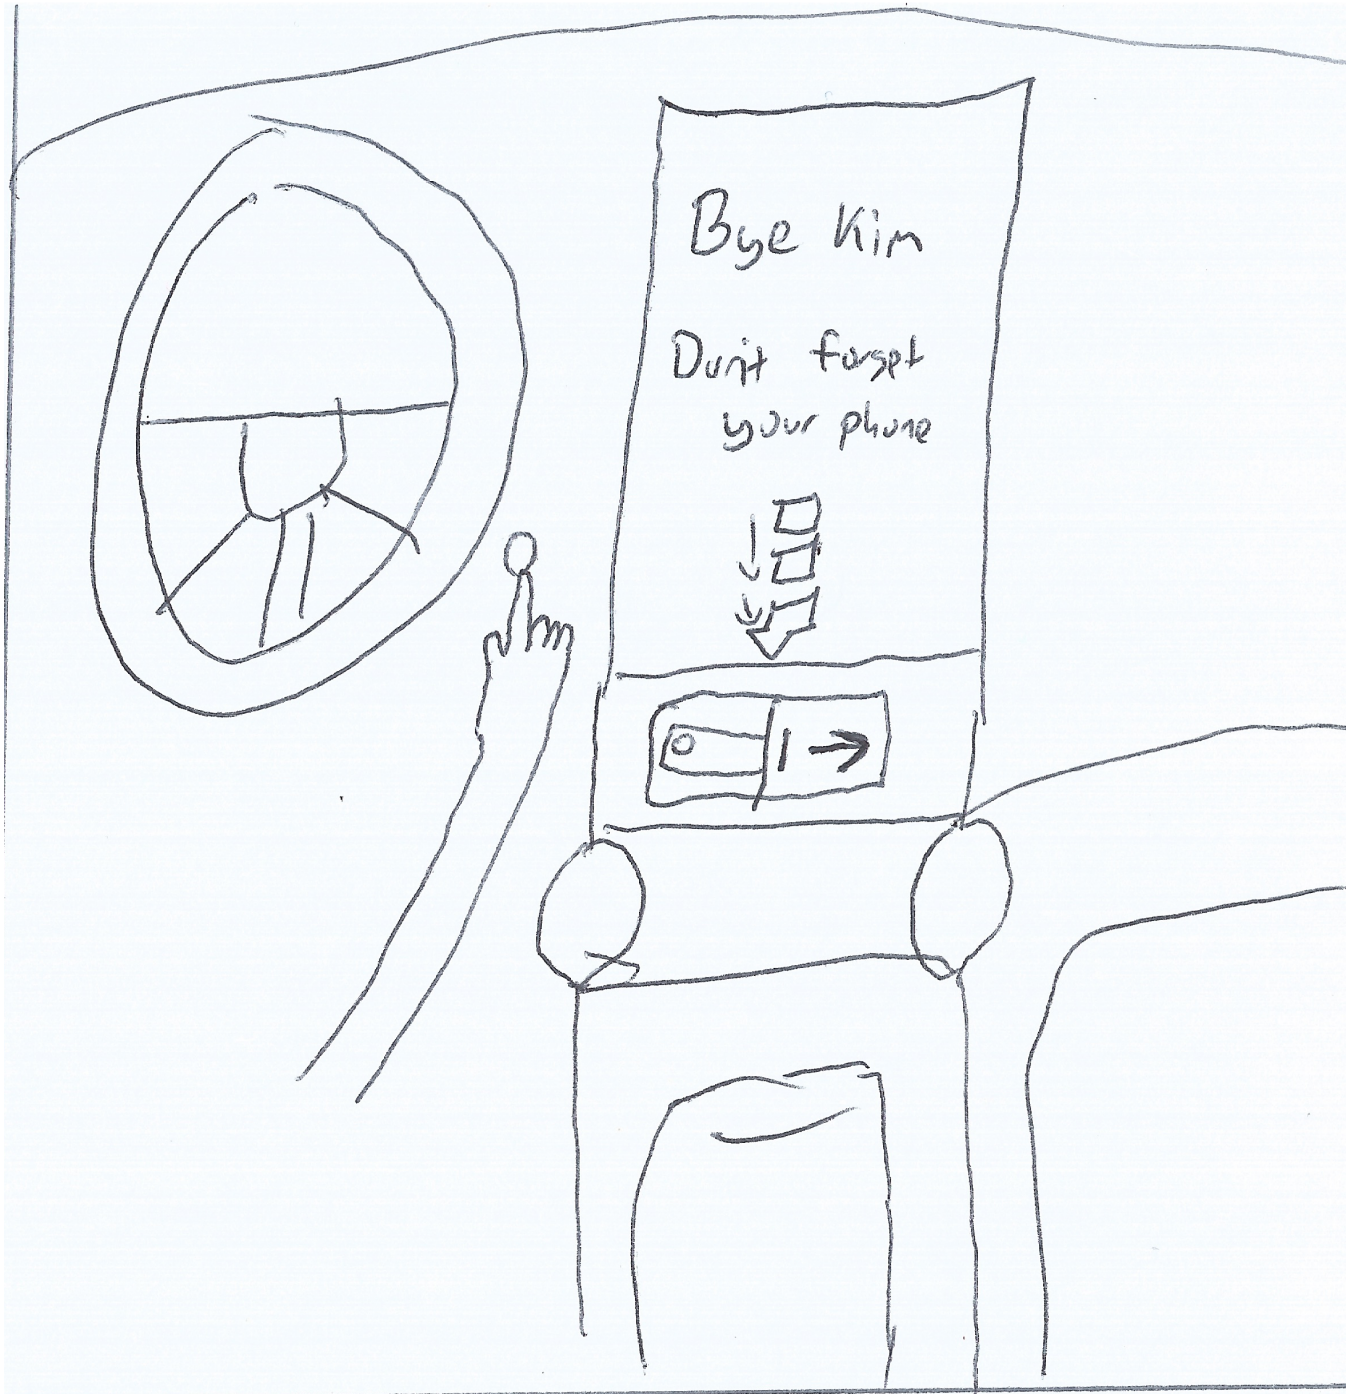
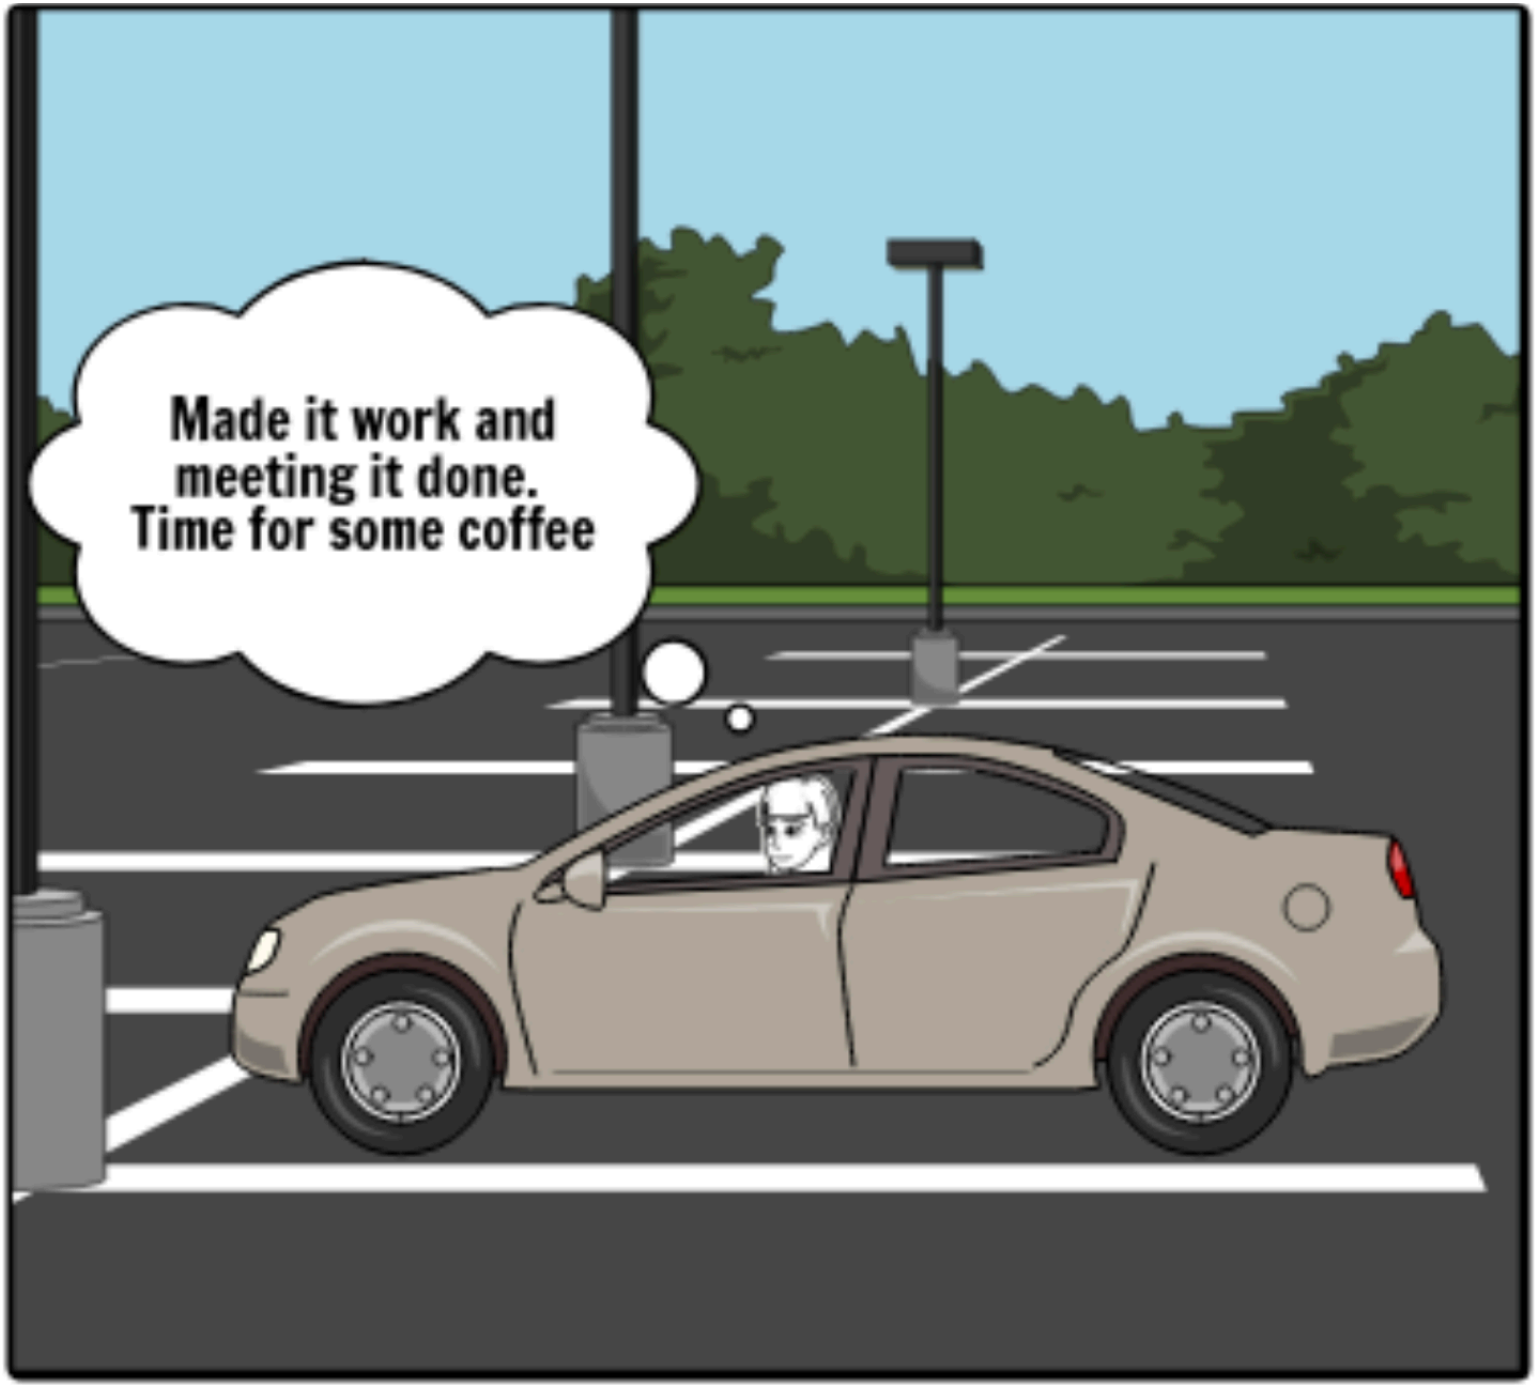
Wheel controls include:
LEFT: Webex (Unmute/End)
RIGHT (primary): Slack (Send/Edit message)



Great meeting.
There is the office.
Perfect timing.



Bye Kim
Dont forget
your phone



Made it work and
meeting it done.
Time for some coffee
